Hyperbaric Oxygen Therapy (HBOT)

Hyperbaric Oxygen Therapy (HBOT) is a treatment method based on the inhalation of pure medical oxygen under conditions of increased atmospheric pressure. The elevated pressure allows the body to absorb significantly greater amounts of oxygen than under normal conditions.

Increased oxygen levels enhance oxygen concentration in the blood plasma, tissues, lymphatic system, and brain, supporting cell regeneration and the growth of new tissue.

The OXYMED Center is equipped with a modern hyperbaric chamber that is suitable even for bedridden patients. The chamber is pressurized with air, while patients breathe pure medical oxygen through specially designed masks, ensuring a safe, comfortable, and effective therapeutic experience.

Positive effects

- ✓ Faster recovery after injuries
- ✓ Support for a treatment of a wide range of medical diagnosis
- ✓ Restoration of weakened organ function
- ✓ Faster wound healing
- ✓ Positive effect on mental well-being
- ✓ Improvement of physical condition
- ✓ Faster body regeneration

Treatment and Regeneration

Hyperbaric oxygen therapy can significantly support treatment and accelerate recovery in a wide range of medical conditions and post-operative states. The combination of increased pressure and a high concentration of oxygen enhances oxygen delivery to the blood and tissues, stimulating the body's natural healing and regenerative processes.

- ✓ Brain and spinal cord injuries
- ✓ Neurodegenerative diseases and disorders of the nervous system
- ✓ Recovery following polytrauma, surgery, and injuries
- ✓ Rehabilitation and recovery
- ✓ Tinnitus and other conditions

Energy and Beauty

The therapy is effective in enhancing recovery following cosmetic procedures and plastic surgery. High concentrations of oxygen accelerate the delivery of nutrients and support amino acid production, promoting the body's natural regenerative processes.

- ✓ Anti-aging effect and higher production of collagen
- ✓ Faster wound healing after surgery
- ✓ Greater resistance to stress
- ✓ Prevention of mental exhaustion

Sports Performance

Hyperbaric oxygen therapy is used by many athletes to improve physical fitness, accelerate recovery, and enhance resistance to injuries and fatigue. Increased oxygen levels help the body recover more quickly after intense physical activity and sports-related injuries.

- ✓ Improvement of physical fitness
- ✓ Preparation for a sporting event
- ✓ Recovery after physical performance
- ✓ Faster healing of sports injuries

Hyperbaric Oxygen Therapy delivers pure medical oxygen to the body under increased atmospheric pressure. This innovative treatment supports regeneration, accelerates wound healing, and activates cells in areas where oxygen supply is normally limited. At OXYMED Center, we provide professional, patient-focused care designed to support your health, enhance recovery, and improve your overall quality of life.
